this textbook reviews the methodologies of reliability prediction as currently used in industries such as electronics automotive aircraft aerospace off highway farm machinery and others it then discusses why these are not successful and presents methods developed by the authors for obtaining accurate information for successful prediction the approach is founded on approaches that accurately duplicate the real world use of the product their approach is based on two fundamental components needed for successful reliability prediction first the methodology necessary and second use of accelerated reliability and durability testing as a source of the necessary data applicable to all areas of engineering this textbook details the newest techniques and tools to achieve successful reliabilityprediction and testing it demonstrates practical examples of the implementation of the approaches described this book is a tool for engineers managers researchers in industry teachers and students the reader will learn the importance of the interactions of the influencing factors and the interconnections of safety and human factors in product prediction and testing

design and analysis of clinical trials for predictive medicine provides statistical guidance on conducting clinical trials for predictive medicine it covers statistical topics relevant to the main clinical research phases for developing molecular diagnostics and therapeutics from identifying molecular biomarkers using dna microarrays to confirming

the us department of defense dod is faced with an overwhelming task in evaluating chemicals that could potentially pose a threat to its deployed personnel there are over 84 000 registered chemicals and testing them with traditional toxicity testing methods is not feasible in terms of time or money in recent years there has been a concerted effort to develop new approaches to toxicity testing that incorporate advances in systems biology toxicogenomics bioinformatics and computational toxicology given the advances dod asked the national research council to determine how dod could use modern approaches for predicting chemical toxicity in its efforts to prevent debilitating acute exposures to deployed personnel this report provides an overall conceptual approach that dod could use to develop a predictive toxicology system application of modern toxicology approaches for predicting

acute toxicity for chemical defense reviews the current state of computational and high throughput approaches for predicting acute toxicity and suggests methods for integrating data and predictions this report concludes with lessons learned from current high throughput screening programs and suggests some initial steps for dod investment

what do you do when you realize that the data set from the study that you have just completed violates the sample size or other requirements needed to apply parametric statistics nonparametric statistics for health care research was developed for such scenarios research undertaken with limited funds often using a small sample size with the primary objective of improving client care and obtaining better client outcomes covering the most commonly used nonparametric statistical techniques available in statistical packages and on open resource statistical websites this well organized and accessible second edition helps readers including those beyond the health sciences field to understand when to use a particular nonparametric statistic how to generate and interpret the resulting computer printouts and how to present the results in table and text format

doctoral thesis dissertation from the year 2017 in the subject engineering computer engineering grade 100 00 100 00 Çukurova university language english abstract the purpose of this thesis is twofold the first purpose is to develop new hybrid feature selection based maximal oxygen uptake vo2max prediction models using for the first time the double and triple combinations of maximal submaximal and questionnaire variables several machine learning methods including support vector machine artificial neural network based and tree structured methods combined individually with three feature selectors relief f minimum redundancy maximum relevance mrmr and maximum likelihood feature selector mlfs have been applied for model development the second purpose is to design a new ensemble feature selector which aggregates the consensus properties of relief f mrmr and mlfs to produce more robust decisions about the set of relevantly identified vo2max predictors and to create more accurate prediction models using 10 fold cross validation on three different datasets the performance of prediction models has been evaluated by calculating their multiple correlation coefficients r s and root mean squared errors rmse s the results show that compared with the results of the other regular feature selection based models in literature the reported values of r and rmse of the hybrid models in

this thesis are considerably more accurate furthermore prediction models based on the proposed ensemble feature selector outperform the models created by individually using the relief f mrmr or mlfs achieving similar or ideally up to 12 46 lower error rates on the average
