we consider the fiscal multiplier and spillover in an environment in which two countries are caught simultaneously in a liquidity trap using an optimizing two country sticky price model we show that the fiscal multiplier and spillover are contrary to those predicted in textbook economics for the country with government expenditure the fiscal multiplier exceeds one the currency depreciates and the

terms of trade worsen the fiscal spillover is negative if the intertemporal elasticity of substitution in consumption is less than one and positive if the parameter is greater than one incomplete stabilization of marginal costs due to the existence of the zero lower bound is a crucial factor in understanding the effects of fiscal policy in open economies author s abstract

this paper integrates models of atemporal risk preference that relax the independence axiom into a recursive intertemporal asset pricing framework the resulting models are amenable to empirical analysis using market data and standard euler equation methods we are thereby able to provide the first non laboratory based evidence regarding the usefulness of several new theories of risk preference for addressing standard problems in dynamic economics using both stock and bond returns data we find that a model incorporating risk preferences that exhibit firstorder risk aversion accounts for significantly more of the mean and autocorrelation properties of the data than models that exhibit only second order risk aversion unlike the latter class of models which require parameter estimates that are outside of the admissible parameter space e g negative rates of time preference the model with first order risk aversion generates point estimates that are economically meaningful we also examine the relationship between first order risk aversion and models that employ exogenous stochastic switching processes for consumption growth

frech analyzes the changing nature of competition in this market with a specific focus on competition among physicians hospitals and insurance companies

recent work by said and dickey 1984 1985 phillips 1987 and phillips and perron 1988 examines tests for unit roots in the autoregressive part of mixed autoregressive integrated moving average ariha models tests for stationarity monte carlo experiments show that these unit root tests have different finite sample distributions than the unit root tests developed by fuller 1976 and dickey and fuller 1979 1981 for autoregressive processes in particular the tests developed by phillps 1987 and phillips and perron 1988 seem more sensitive to model misspeciflcation than the high order autoregressive approximation suggested by said and diekey 1984
